

PHP Modular Development Framework - Project Definition Prompt

Version: 1.0

Owner: [Your Name]

Project Type: Core PHP Framework for Custom Web Apps

Goal: Modular, scalable, multi-template-ready PHP development framework supporting page-level routing, database switching, metadata injection, and flexible UI theming.

Directory Structure Overview

```
htdocs/
■■■■ index.php          # Main entry point; routes all requests
■■■■ includes/
■ ■■■■ functions.php    # Reusable PHP functions
■■■■ conf/
■ ■■■■ config.php       # Global settings (debug, default template, etc.)
■ ■■■■ db_ms_config_1.sql # Database 1 connection config
■ ■■■■ db_ms_config_2.sql # Database 2 connection config
■■■■ js/
■ ■■■■ scripts.js       # Site-wide JavaScript
■■■■ css/
■ ■■■■ style.css        # Global CSS styles
■■■■ pages/
■ ■■■■ info.php
■ ■■■■ info/
■ ■ ■■■■ meta.php       # Metadata for "info" section
■ ■■■■ blog/
■ ■■■■ post1.php
■ ■■■■ meta.php         # Metadata for blog section
■■■■ template/
■ ■■■■ template1/
■ ■ ■■■■ layout.php
■ ■ ■■■■ header.php
■ ■ ■■■■ footer.php
■ ■ ■■■■ style.css
■ ■ ■■■■ config.php     # Template metadata (name, version, colors)
■ ■■■■ template2/
■ ■■■■ layout.php
■ ■■■■ ...
■■■■ log/
■ ■■■■ error.log        # Optional log file if debug is enabled
```

Routing System

- Handled entirely by index.php
- Initial format: index.php?page=info or index.php?page=blog/post1
- Dynamic discovery of page files
- Future: Clean URLs via NGINX rewrite

Template Engine

- Organized by folders (template1/, template2/)
- Each contains layout.php, header.php, footer.php, style.css
- Optional config.php with metadata
- Templates selectable globally or per page

Metadata System

- meta.php file per folder in pages/
- Returns title, description, keywords, and template

Authentication

- JS-based encryption with client-side and server-side salting
- PHP session-based authentication

Multi-DB Support

SQL config files in conf/
